

Materials Laboratory & Special Inspections Services

Eureka and Willits, CA and North Bend and Lakeview, OR

SHN-engr.com

Successful engineering design and construction depends on reliable and strong materials and connections. We help minimize our clients' construction risks through testing and inspection services. Over 20+ years, our inspection teams have developed strong reputations for reliability and professionalism.

SHN's materials laboratories and special inspection services bring more value than others' testing services in two important ways:

1. Our inspectors have multiple certifications, eliminating costly time delays. On the job site, they recognize when additional testing may be needed, consult the construction engineer, and carry the equipment necessary to perform additional inspections or on-site materials testing.
2. Our quality control system is excellent, and our labs are accredited by the American Association of State Highway and Transportation Officials (AASHTO) Accreditation Program.

SHN's Certifications and Testing Services include:

- AASHTO Accredited Laboratory
- American Concrete Institute (ACI) Certified Laboratory & Technicians
- Caltrans Certified Laboratory & Technicians. Lab #114 and #219
- California Division of the State Architect (DSA) Approved Laboratory #125 and #250
- Certified Welding Inspection
- Nondestructive Testing (NDT)
- Concrete & Masonry Inspection
- Core Drilling
- Soil compaction testing
- Hot Mix Asphalt Mix Designs
- International Code Council (ICC) Special Inspection Services
 - * Reinforced Concrete
 - * Structural Masonry
 - * Spray Applied Fireproofing
- Proficiency Sample Programs
 - * AASHTO resource
 - * CCRL
 - * Caltrans Reference Sample Program
- Geotechnical Testing
